P2 (part 3)

Akanksha Bansal (akankshabansal90@gmail.com)
Gaurav Nanda   (gaurav324@gmail.com)
Prateek Agarwal (prat0318@gmail.com)

Running instructions:

    $ sh ./runscript.sh

Brief explanation on model transformation performed:

- Wrote associations described for the f2 database
- Analyzed how they change from f1 to f2.
- After that, it was a single line prolog transformation.

Hints taken:

- grandfather and parents example discussed in the class.
- TableAlias info provided in MDElite doc
- print.pl provided in MDElite/libpl/

Interesting points:

- It was interesting to note the power of Prolog to transform a model to another using a single line of code.
